Survey: EDiT Quality of Care Study Final Version 2^a

Team: ● Everyone

1. Introduction

This form is designed to record your reviewer quality rating for the ED records that have been selected for you to review. There are two components to the review which are both contained in the form.

In part 1 of the form you will asked to provide tick box type responses on questions about specific components of the care relevant to the specific condition you are reviewing.

In part 2 there is a 'holistic review' – in which we will ask you to provide an overall view of the quality of care contained in the record (on a 6-point scale ranging from unsatisfactory to very good care). This form contains guidance on how to score quality of care on the 6-point scale.

We will also ask you to provide some free text comments to give an overview of why you rated the overall quality as you did and some comments about the complexity/difficulty of the case.

1. Please provide your unique Reviewer ID (should be automatically inputted):*

[url("reviewerID")]

2. Please input the Doctor ID marked at the top of the notes.*
