Family Intervention

African Caribbean people with schizophrenia

# Would you like to help us develop a new 'talking therapy'

## for African Caribbean patients and their families?

This research involves working with different people to develop a therapy that meets the needs of African Caribbean patients and their families.

We are looking for current or former patients with schizophrenia or psychosis of Manchester Mental Health Services. You do not need to have contact with your family to take part.

Patients will be of African Caribbean origin. This includes 'Black-British' and 'Mixed' African Caribbean people who have at least one African Caribbean parent or grandparent.

We are inviting **past** and **present patients** with **schizophrenia** or **psychosis** who regard themselves as being of **African Caribbean origin** to take part in our research.

Funded by the National Institute of Health Research Health Service & Delivery Research (NIHR HS&DR) Programme

To find out more about the research or if you are interested in taking part, please contact:
