

DATA COLLECTION FROM INTERVENTION TEAMS
SIX MONTHS FOLLOW-UP

Please ask questions below of keyworkers/clinical teams for each patient in the intervention group, for the period of six months after the end of the intervention. For a patient who receives depots in a depot clinic and has no keyworker consider collecting data from the CPNs who administer the depots in the depot clinic. If a patient has no keyworker please ask the team Consultant Psychiatrist to answer the questions.

Key workers with more than one patient in the FIAT study should be interviewed only once but one form should be completed for each patient. Please indicate the ID numbers of all his/her patients in the FIAT study in the appropriate box below.

For all questions where a clinician with more than one study patient indicates an effect please ask and note the number of patients for whom the effect applies.
