

## Stage One

### Review One

**Search:** MEDLINE, CINAHL, PsyINFO, Social Sciences Citation Index (SSCI) and SCOPUS. Including hand searching, snowballing, conference abstracts etc. to identify theoretical literature

### Inclusion criteria:

English language. January 1990 to January 2014. MESH terms to be agreed with Steering Committee and cross checked against 10 highest impact factor journals: 'Disab\*', 'Theor\*', 'Sociolog\*', 'Model\*' etc.). Examine for 'critique' and 'development' including broadly based disability studies. Cross-check to find most highly cited monographs.

**Identify:** models and theories found in research with disability studies, sociological literature and national and international public health policy. Give recommendations linked to commissioning brief.

**Analysis, writing up and dissemination**

## Stage Two

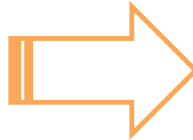

### Review Two

**Search:** Cochrane Systematic Reviews Database and randomly select **60 studies**, assessed according to definitions and MESH terms **identified in review one** and checked with Steering Committee.

**30 disability studies:** Examine for explicit disability focus and relevance for public health research.

**30 generic studies:** Examine potential for mainstreaming of disability in research design.

**Synthesis of Review One & Two**  
Discuss with **Project Steering Committee and workshops** and gain critical feedback, analysis and user involvement. Refine synthesis.

**Analysis, writing up  
and dissemination**

**Final Report; accessible  
summary; and policy  
briefing**
